Heasell's first **hybrid** company car

Toyota Prius hybrid car – Heasell go **green!**

Heasell Electromechanical Services are looking to the future and trying to reduce their carbon footprint with a new addition to its company car fleet. This is a ground breaking green car, powered using a combination of an electric and conventional petrol engine which gives an average fuel consumption figure of 59 MPG, an amazing figure for such a spacious and comfortable car. Further, it has been claimed the Prius emits up to one tonne less CO₂ per year than an equivalent family vehicle with a diesel engine.
